Rhabdomyolysis Presenting As Third-Degree Atrioventricular (AV) Block Eugenio Martinez Hurtado,2017 Background Rhabdomyolysis is a rare but severe complication of urological surgery We present a case with a patient who developed rhabdomyolysis after surgery Diagnostic suspicion arose after the ECG exhibited a third degree heart block caused by significant hyperkalaemia Case Report A 75 years old male with history of chronic kidney disease Stage 3a and VVI Pacemaker with currently appropriate native rhythm was scheduled for a left laparoscopic nephroureterectomy The surgery lasted 300 minutes Postoperatively the patient developed acute kidney failure with moderate hyperkalaemia and he was found to have a complete AV block because a pacemaker started triggered Rhabdomyolysis was suspected and definitive diagnosis was made by serum creatine kinase CK levels of 41138 U L Vigorous fluid resuscitation was required as well as treatment for hyperkalaemia diuretics and urine alkalization¹ After stabilization of hyperkalemia he had his own rhythm back His CK levels gradually dropped over the next hours but creatinine peaked in a few days Discussion Rhabdomyolysis is a well known complication in urologic procedures² with an incidence of 0.67-1% A high index of suspicion is critical for diagnosing it and must be considered as the presence of renal failure and reddish brown urine The final pathogenetic pathway promotes muscle cell damage and release of myoglobin creatine phosphokinase potassium and other enzyme and electrolytes into systemic circulation Postoperative renal failure was expected in this case it was hyperkalaemia and complete AV block which triggered pacing that brought us on track to request further test and made the diagnosis Rhabdomyolysis presenting as complete AV block it is uncommon To our knowledge there is only one case reported and it was not related with a surgical procedure³ We believe hyperkalaemia made our patient suffered from cardiac dysfunction due to exacerbated chronic renal failure and rhabdomyolysis Patient had his own heart rate back as soon as potassium levels tapered to a normal level References 1 Yiannis S et al Nephrology 2006 11 282-4 2 Irvine J et al Eur J Intern Med 2008 19 8 568-74 3 Brooke E Sipe et al Ann Pharmacother 2003 37 6 808-11 Learning points Third degree heart block is an uncommon presentation of postoperative Rhabdomyolysis It should be suspected following prolonged surgical procedures and acute kidney failure with hyperkalaemia
