The Language of Color Matthew Luckiesh,2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1918 edition Excerpt peimitive language it is often remarked that the prevailing colornames found in the languages of primitive races and in the vocabularies of children can be assumed to represent the colors which affect these beings most powerfully Usually deductions of the orders of preference are made by noting the relative frequencies of occurrence of the various color names It should be obvious that such a criterion is dangerous if depended upon too confidently in a study of the expressive powers of colors The present subject is introduced here chiefly for the purpose of emphasizing the danger of placing too riuch value upon information from this source It is reasonable to suppose that the color names in the vocabularies of primitive beings indicate in a general manner the more powerful colors However these are known through other sources including ordinary observation so that such evidence is at best only corroborative The limitations of interpretations from this source are due among other reasons to the incompleteness of knowledge regarding the colorvision of these primitives and the influence of mental growth in the case of the child There are many thousands of different colors distinguishable by an adult at the present time in fact in a broad sense wherein grays are considered as colors the number of different color sensations that can be experienced is perhaps several hundred thousand It is not surprising that the immature or primitive intellect only comprehends a few of these and it is reasonable to suppose that the most striking colors will be recognized first The finer feeling toward colors that is the recognition of their beauty depends largely upon the taste of the beholder and taste according to civilized standards is

Through the Language Glass Guy Deutscher,2010 Generalisations about language and culture are at best amusing and meaningless but is there anything sensible left to be said about the relation between language culture and thought Does language reflect the culture of a society I

Through the Language Glass Guy Deutscher, 2010-08-31 A masterpiece of linguistics scholarship at once erudite and entertaining confronts the thorny question of how and whether culture shapes language and language culture Linguistics has long shied away from claiming any link between a language and the culture of its speakers too much simplistic even bigoted chatter about the romance of Italian and the goose stepping orderliness of German has made serious thinkers wary of the entire subject But now acclaimed linguist Guy Deutscher has dared to reopen the issue Can culture influence language and vice versa Can different languages lead their speakers to different thoughts Could our experience of the world depend on whether our language has a word for blue Challenging the consensus that the fundamentals of language are hard wired in our genes and thus universal Deutscher argues that the answer to all these questions is yes In thrilling fashion he takes us from Homer to Darwin from Yale to the Amazon from how to name the rainbow to why Russian water a she becomes a he once you dip a tea bag into her demonstrating that language does in fact reflect culture in ways that are anything but trivial Audacious delightful and field changing Through the Language Glass is a classic of intellectual discovery

Color Language and Color Categorization Jonathan Brindle, Geda Paulsen, Mari Uusküla, 2016-08-17 This volume represents a unique collection of chapters on the way in which color is categorized and named in a number of languages Although color research has been a topic of focus for researchers for decades the contributions here show that many aspects of color language and categorization are as yet unexplored and that current theories and methodologies which investigate color language are still evolving Some core questions addressed here include How is color conceptualized through language What kind of linguistic tools do languages use to describe color Which factors tend to bias color language What methodologies could be used to understand human color categorization and language better How do color vocabularies evolve How does context impact the color cognition The chapters collected here adopt different theoretical and methodological approaches in describing new empirical research on how the concept of color is represented in a variety of different languages Researchers in linguistics psychology and cognitive science present a set of new explorations and challenges in the area of color language The book promotes several methodological and disciplinary dimensions to color studies The color category is given an in depth and broad based examination so a reader interested in color conceptualization for itself will be able to form a solid vision of the subject

The World Color Survey Paul Kay,2011-02-15 The 1969 publication of Brent Berlin and Paul Kay's Basic Color Terms proved explosive and controversial. Contrary to the then popular doctrine of random language variation, Berlin and Kay's multilingual study of color nomenclature indicated a cross-cultural and almost universal pattern in the selection of colors that received abstract names in each language. The ensuing debate helped reform the views of anthropologists, linguists, and psychologists alike. After four decades in print, Basic Color Terms now has a sequel in this book, the authors authoritatively extend the original survey, studying 110 additional unwritten languages in detail and in situ. The results are presented with charts showing the overall palette of color terms within each language as well as the levels of agreement among speakers.

German Colour Terms William Jervis Jones,2013-06-15 This monograph provides for the first time a comprehensive historical analysis of German colour words from early beginnings to the present based on data obtained from over one thousand texts. Part 1 reviews previous work in colour linguistics. Part 2 describes and documents the formation of popular colour taxonomies and specialised nomenclatures in German across many periods and fields. The textual data examined will be of relevance to cultural historians in fields as far apart as philosophy, religious symbolism, medicine, mineralogy, optics, fine art, fashion, and dyeing technology. Part 3, the core of the work, traces linguistic developments in systematic detail across more than twelve centuries. Special attention is given to the evolving meanings of colour terms, their connotative values, figurative extensions, morphological productivity, and lexicographical registration. New light is shed on a range of scholarly issues and controversies in ways relevant to German lexicologists and to specialists in other languages, notably French and English.
