Actually, It's Not Easy Nicholas Cohen,2018-04-05 Fake news Alternative facts Ideological agendas How do you tell the difference between true and false How do you know what it all means In *Actually It s Not Easy* novices and experts alike can grow their ability to understand complex topics in today s world A consistent analytical approach results in an understandable context useful for solving problems Timely subjects like health reform and tax policy blend with voyages into probability theory and the history of totalitarian coups These topics perhaps arcane at the start achieve clarity and consequence on their way to an often surprising thesis Only by accepting perhaps even enjoying the complexity of these topics can we hope to achieve sturdy solutions to the problems faced by our society

A Design for a Reusable Water-Based Spacecraft Known as the Spacecoach Brian McConnell,Alexander Tolley,2015-09-15 Based on components already in existence this manual details a reference design for an interplanetary spacecraft that is simple durable fully reusable and comprised mostly of water Using such an accessible material leads to a spacecraft architecture that is radically simpler safer and cheaper than conventional capsule based designs If developed the potential affordability of the design will substantially open all of the inner solar system to human exploration A spacecraft that is comprised mostly of water will be much more like a living cell or a terrarium than a conventional rocket and capsule design It will use water for many purposes before it is superheated in electric engines for propulsion purposes which include radiation shielding heat management basic life support crew consumption and comfort The authors coined the term spacecoaches to describe them as an allusion to the Prairie Schooners of the Old West which were simple rugged and could live off the land

System Configuration Management Jacky Estublier,2003-07-31 This workshop series is now over ten years old which is a pretty long time for a very focussed topic Configuration Management The first conference took place in 1988 Grassau Germany and the topics were focussed on version control and rebuilding Many people consider that SCM is one of the few areas of software engineering that can be considered to be really successful Products that more or less fulfill their purpose exist and everybody agrees that they are now mandatory for a successful software project Indeed during the second half of the nineties SCM has entered a maturation phase in which good commercial products have been incorporating many of the features signed and discussed at previous conferences of this workshop With the generalization of commercial products the question now is What are the objectives of a scientific workshop on this topic Is there any more research to be done in SCM today This ninth volume in the series reflects pretty well the current state and mood in the CM community There are an unprecedented number of papers discussing the current state of the art and trying to identify research directions session 6 On some core topics like versioning session 3 and following SCM8 tracks papers present work on unified models Versioning models after years of raging discussions now seem to have found a consensus

Vessels and Stations of Earthspace and The Belt Richard Penn,2016-05-22 The spread of humanity into the Solar System is a practical possibility for the next few decades beginning with the reusable launch vehicles being developed right now by SpaceX and others Once that first step is economical private companies will disrupt space using technologies that are available right now With generic tools and engineers who know how to use them they will build ships and stations from the materials they find in space This book shows how that might be with illustrations and technical details for everything they build It is a science of book laying out the technical assumptions and the scenario behind my novels Like them it uses real world science and feasible technology avoiding all the fantasy elements that have crept into much science fiction The book also provide illustrations and resources which other authors could use in writing their own science based space fiction I recommend this Lulu edition it has better paper and a title on the spine

Artificial Adaptive Systems Using Auto Contractive Maps Paolo Massimo Buscema,Giulia Massini,Marco Breda,Weldon A. Lodwick,Francis Newman,Masoud Asadi-Zeydabadi,2018-02-24 This book offers an introduction to artificial adaptive systems and a general model of the relationships between the data and algorithms used to analyze them It subsequently describes artificial neural networks as a subclass of artificial adaptive systems and reports on the backpropagation algorithm while also identifying an important connection between supervised and unsupervised artificial neural networks The book s primary focus is on the auto contractive map an unsupervised artificial neural network employing a fixed point method versus traditional energy minimization This is a powerful tool for understanding associating and transforming data as demonstrated in the numerous examples presented here A supervised version of the auto contracting map is also introduced as an outstanding method for recognizing digits and defects In closing the book walks the readers through the theory and examples of how the auto contracting map can be used in conjunction with another artificial neural network the spin net as a dynamic form of auto associative memory
