The Psychology of Attitudes and Attitude Change Joseph P. Forgas,Joel Cooper,William D. Crano,2011-01-07 Human beings have a unique ability to create elaborate predispositions and evaluations based on their social experiences The concept of attitudes is central to understanding how experience gives rise to these predispositions and psychologists have spent the best part of the past 100 years trying to understand the intricacies of this process Yet despite decades of research we still do not fully understand how attitudes are created maintained and changed The main objective of this book is to review and integrate some of the most recent cutting edge developments in research on attitudes and attitude change presenting the work of eminent scholars in this field Chapters in this book deal with such intriguing questions as What role do associative processes play in the formation of attitudes How do attitudes function as global and local action guides What is the function of implicit evaluations and vicarious experiences in producing attitude change Are implicit associations a useful way to measure attitudes What role does affect play in attitude formation and change What role do social interaction processes play in persuasion and how does persuasion work in real life settings The book is essential reading for students and researchers in social psychology as well as practitioners in every field where understanding and changing attitudes is important such as clinical counseling organizational marketing forensic and developmental psychology

A Structural-functional Approach to Attitudes Alberto Mario Belo Dos Santos, 1976

Beliefs, Attitudes, and Values Milton Rokeach, 1968 This is a revolutionary book Rokeach seriously questions the vast research on attitudes and attitude change as well as some of the well known theories in this area And perhaps more crucially he documents the need to replace the delimited concern for attitudes with a systematic and organized theory about values Rokeach provides theoretical and reach substance and meaning to the previously scattered thought about beliefs attitudes and values In doing so he opens new avenues of understanding about man s values and he documents the necessary new directions in research Belief Attitudes and Values represents and elaboration of my continuing interest in the nature of belief systems The title reflects my view that an understanding of man s beliefs attitudes and values will not come unless we are willing to distinguish these concepts from one another and to employ them in distinctively different ways The subtitle conveys my view that beliefs attitudes and values are nonetheless interrelated and form a functionally integrative cognitive system With the framework of a person centered theory of belief systems I present a systematic way of thinking about the problems that have not been satisfactory handles in social psychology there is little consensus about exactly what we mean when we speak of belief and an attitude a value a value system We are a long way from understanding the theoretical relationship between attitudes and behavior between attitude change and behavioral change and we have not yet learned how to predict accurately one from the other The majority of experimental findings on attitude change have little to do with attitude change since the findings can be more simply accounted for on other grounds The literature on attitude change does not seem to serve the interests of the educator and therapist nearly so much as it serves the interest of specialized persuaders in advertising the mass media politics and public relations
