**The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder** American Psychiatric Association, 2018-01-11 Alcohol use disorder AUD is a major public health problem in the United States. The estimated 12 month and lifetime prevalence values for AUD are 13.9% and 29.1% respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than 200 billion annually. Despite its high prevalence and numerous negative consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12 month diagnosis of AUD receive any treatment. Nevertheless, effective and evidence-based interventions are available, and treatment is associated with reductions in the risk of relapse and AUD-associated mortality. The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder seeks to reduce these substantial psychosocial and public health consequences of AUD for millions of affected individuals. The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD. In addition to reviewing the available evidence on the use of AUD pharmacotherapy, the guideline offers clear, concise, and actionable recommendation statements, each of which is given a rating that reflects the level of confidence that potential benefits of an intervention outweigh potential harms. The guideline provides guidance on implementing these recommendations into clinical practice with the goal of improving quality of care and treatment outcomes of AUD.

**Guidelines for the Treatment of Alcohol Problems** Paul S. Haber, Benjamin C. Riordan, 2021-04-01 The Australian Guidelines for the Treatment of Alcohol Problems have been periodically developed over the past 25 years. In 1993, the first version of these guidelines, titled *An outline for the management of alcohol problems*, was published. Quality assurance in the treatment of drug dependence project was published. Mattick, Haber et al, 2009. The present version of the Guidelines was also commissioned by the Commonwealth of Australia to remain current and integrated with the updated NHMRC consumption guidelines 2020. In order to ensure that guidelines remain relevant, the next set of guidelines should be updated in 2025, consistent with NHMRC recommendation that guidelines be updated every five years. These guidelines aim to provide up-to-date evidence-based information to clinicians on available treatments for people with alcohol problems and are largely directed towards individual clinicians in practice, such as primary care physicians, general practitioners, nursing staff, specialist medical practitioners, psychologists, and other counsellors, and other health professionals. Some chapters highlight service or system-level issues that impact on clinicians and their patients. These include recommendations concerning Aboriginal and Torres Strait Islander peoples, culturally and linguistically diverse groups, stigma and discrimination. Elsewhere, organisation capacity is implied, such as medical resources for withdrawal management, where recommendations indicate use of medications. As all forms of treatment will not be readily available or suitable for all populations or settings, these guidelines may require interpretation and adaptation.

The new edition has been extensively revised to take account of recent drug developments and advances in psychotherapeutic interventions. Incorporating a wealth of new information, these eminent researchers and clinicians thoroughly review all available outcome data and clinical trials and provide detailed specification of methods and procedures to ensure effective treatment for each major DSM-IV disorder. As an interdisciplinary work that integrates information from both clinical psychology and psychiatry, this new edition will continue to serve as an essential volume for practitioners of every kind: psychiatrists, psychologists, clinical social workers, counselors, and mental health consultants.
