Diagnosis in Otorhinolaryngology T. Metin Önerci,2009-09-29 In preparing the material for this book I took the advice of my students who generously shared their views and opinions with me I was told that it would be preferable to have images of the various diseases with legends describing the disease Students would be able to learn and retain the information more successfully if the material was accompanied by pictures and schematic drawings Recent advances in technology have made it possible to photograph regions that are difficult to view with the naked eye such as the ear nose throat nasopharynx and larynx all the areas of otorhinolaryngology Such an illustrated text in this field is important and necessary for teaching purposes In this book I tried to compile images of the basic conditions that are commonly seen in general practice and to give the reader a visual survey with a brief description of the condition I added tables and schematic drawings in order to provide practical information It is not the purpose of this book to be a comprehensive textbook since many textbooks are already available with more detailed information of the conditions illustrated here This book is primarily intended for medical students family and general practitioners and ENT trainees It may also serve as basic reading material for those in allied specialties I hope my colleagues find this book useful and it contributes toward their teaching purposes
