PERCUTANEOUS ELECTRICAL NERVE BLOCK OF ACUTE PAIN IN HUMANS Phillip Schorr,2017 PERCUTANEOUS ELECTRICAL NERVE BLOCK OF ACUTE PAIN IN HUMANS Amol Soin Brandon Winchester Ryan Caldwell Erin Dewenter Natalia Alexeeva Wanzhan Liu Phil Schorr Shyamy Sastry Eric Schepis Background and aims High frequency electrical stimulation HFES delivered to a peripheral nerve through implanted electrodes can reduce chronic pain However surgical placement burdens the use of HFES for acute applications We investigated the effects of HFES delivered percutaneously to a sensory nerve on acute pain elicited in able bodied AB subjects and on post surgical pain in one subject within 24 hours of total knee arthroplasty TKA Material and Methods High frequency electrical stimulation sinewave 10 kHz 25 mA was delivered to the saphenous nerve at the adductor canal via a percutaneous lead in 5 AB and 1 TKA subjects Acute pain sensations in AB subjects were elicited by transcutaneous electrical stimulation of the saphenous nerve at the ankle Subjective sensations 11 point scale with 3 corresponding to pain threshold pain scores NRS and muscle activity were recorded The study was approved by Copernicus IRB Results All subjects reported reduced pain scores in response to HFES In able bodied subjects painful sensations were either completely abolished N 4 Fig 1a or reduced N 1 Fig 1b Post surgical pain in the TKA subject was reduced from 6.5 to 2.5 on NRS Pain scores in all 6 subjects returned to baseline values within seconds to minutes after the stimulation was terminated High frequency electrical stimulation did not elicit EMG activity or visible contractions of the thigh muscles No serious adverse effects were reported Conclusion Percutaneous high frequency electrical stimulation of the saphenous nerve in the adductor canal can reversibly block acute pain sensations in humans without causing co excitation of nearby muscles

Spinal Cord Stimulation Paul G. Kreis, Scott Fishman, 2009 Spinal cord stimulators SCS are implantable medical devices used to treat chronic pain of neurologic origin such as sciatica intractable back pain and diabetic neuropathy The device generates an electric pulse near the spinal cord's dorsal surface providing a paresthesia sensation that alters the perception of pain by the patient and is typically used in conjunction with conventional medical management Spinal cord stimulators SCS are implantable medical devices used to treat chronic pain of neurologic origin such as sciatica intractable back pain and diabetic neuropathy The device generates an electric pulse near the spinal cord's dorsal surface providing a paresthesia sensation that alters the perception of pain by the patient and is typically used in conjunction with conventional medical management

Transcutaneous Electrical Nerve Stimulation (TENS) Mark I. Johnson, 2014-03-06 Transcutaneous electrical nerve stimulation TENS is a technique that delivers mild electrical currents across the intact surface of the skin to reduce pain TENS is used by practitioners throughout the world to manage painful conditions and TENS equipment can be purchased by the general public so that they can self administer treatment There are thousands of experimental and clinical research studies published on TENS and related techniques yet there is uncertainty about the best way to administer TENS in clinical practice This is because currents used during TENS can be administered in a variety of ways and the findings of research studies have been inconclusive This book provides guidance on how best to use TENS based on an evaluation of current research evidence The book covers what TENS is how it works and safe and appropriate clinical techniques for many conditions including chronic low back pain osteoarthritis and cancer pain It also offers solutions to the problems faced by researchers when trying to design clinical trials on TENS Accessibility written Transcutaneous Electrical Nerve Stimulation TENS provides a comprehensive coverage of research issues and findings about TENS and will be essential reading for healthcare professionals practitioners and students

Neuromodulation for Facial Pain K.V. Slavin, 2020-11-16 Neuropathic pain involving the face can be very severe and disabling often it is hard to control with conventional means and requires use of unconventional interventions on various parts of the trigeminal nociceptive pathways For the last 60 years neuromodulation has been used specifically for the treatment of intractable pain in different parts of the human body including the face and head region Despite such a long history and existence of many neuromodulation targets there has not been a dedicated book that would summarize the entire spectrum of neuromodulation approaches that have been and still are used for treatment of facial pain This book begins with dedicated chapters on classification of facial pain and anatomy of facial pain pathways and then dives into specific applications of neuromodulation starting from the periphery all the way to cerebral centers of pain processing covering both invasive and non invasive approaches Written by experts from all over the world the book offers an up to date comprehensive summary of neuromodulation techniques and modalities providing the readers with a practical guide on clinical details of patient selection modulation parameters procedural details and expected outcomes that may be used in daily clinical practice dealing with most difficult facial pain conditions

Spinal Cord Stimulation Paul Kreis, Scott Fishman, 2009-06-03 Spinal cord stimulators SCS are implantable medical devices used to treat chronic pain of neurologic origin such as sciatica intractable back pain and diabetic The device generates an electric pulse near the spinal cord s dorsal surface providing a parasthesia sensation that alters the perception of pain by the patient and is typically used in conjunction with conventional medical management Spinal cord stimulators SCS are implantable medical devices used to treat chronic pain of neurologic origin such as sciatica intractable back pain and diabetic The device generates an electric pulse near the spinal cord s dorsal surface providing a parasthesia sensation that alters the perception of pain by the patient and is typically used in conjunction with conventional medical management

USING PERCUTANEOUS ELECTRICAL NEUROSTIMULATION (PENS) TO TREAT REFRACTORY NEUROPATHIC PAIN POSTHERNIORRHAPHY

Ernesto Pastor Martinez, 2017 BACKGROUND AND AIMSTo describe the efficacy of PENS to the control of neuropathic pain refractory to conventional treatment METHODSThe presented case is a 37 year old male patient with a medical history of right herniorrhaphy 2 years ago due to indirect inguinal hernia Despite the surgical treatment pharmacological therapy and infiltrations of local anesthetics and corticosteroids he has been suffering pain in the herniated zone extended to the testicle since 3 years ago It has been decided to perform PENS Percutaneously a needle with electrodes was inserted in the painful area with a 2 cm depth or less and it was connected to a stimulator that alternates electrical pulses of 2 and 100 Hz every 3 seconds intensity of 0.5 V for a period of 20 minutes Previously a stimulation test was performed creating a paresthesia in the usual pain area RESULTSA significant improvement of the pain was observed with a VAS reduction of about 70% in 15 days considering the therapy successful CONCLUSIONSPENS therapy facilitates the release of different neuropeptides due to the combination of two frequencies of stimulation It has been used successfully in the treatment of postherpetic neuralgia trigeminal or occipital neuralgia among others with excellent results Rossi et al Pain Physician 2016 19 E121 E128 This technique is considered minimally invasive and safe inducing analgesic effects Therefore its application is very promising

Pain Treatment by Transcutaneous Electrical Nerve Stimulation (TENS) David Ottoson, Thomas Lundeberg, 2012-12-06 Abundant evidence indicates that TENS can be used effectively to alleviate certain pain syndromes For patients suffering from chronic musculo skeletal pain in particular TENS offers an alternative means of pain management This book addresses the need among physiotherapists for a practical manual on the application of this relatively new technique Numerous illustrations provide guidelines for the choice of stimulation parameters the selection of electrode positions as well as other aspects related to technique A brief introduction to the neurophysiological mechanisms of pain and the pain relieving effects of TENS is also given These special features make this comprehensive presentation of particular interest to physiotherapists and clinicians actively engaged in the management of patients suffering from pain

Clinical Transcutaneous Electrical Nerve Stimulation Jeffrey S. Mannheimer, Gerald N. Lampe, 1984

Electrical Nerve Stimulation Frank Rattay, 2013-06-29 Functional electrical stimulation is the most important application in the field of clinical treatment with currents or magnetism This technique artificially generates neural activity in order to overcome lost functions of the paralyzed incontinent or sensory handicapped patient Electricity and magnetism is also used in many cases e g to stimulate bone growth or wound healing Nevertheless the basic mechanism of the artificial excitation of nerve and muscle fibers has become known only in the last few years Although many textbooks are concerned with the natural excitation process there is a lack of information on the influence of an applied electrical or magnetic field This book written for students and biomedical engineers should close the gap and furthermore it should stimulate the design of new instrumentation using optimal strategies

Stimulation of the Peripheral Nervous System K.V. Slavin,2015-09-09 Among neuromodulation procedures electrical stimulation of peripheral nerves PNS is probably the most underappreciated modality Although PNS is used for all kinds of medical conditions ranging from chronic neuropathic pain and headache to epilepsy depression hypertension and heart failure its importance is frequently overshadowed by spinal cord stimulation and deep brain stimulation While the earlier version of this book dealt exclusively with various pain syndromes this new volume covers the entire spectrum of PNS applications Written by recognized authorities in their respective fields the chapters of this title describe the use of PNS in the management of neurological psychiatric otorhinolaryngological cardiovascular pulmonary colorectal and genitourinary disorders To reflect the complexity of the regulatory process the book ends with a special chapter dedicated to the current state of approval of different PNS devices This book will be of great value to all those who deal with neuromodulation including clinicians who select PNS candidates surgeons and other specialists who implant PNS devices and researchers and engineers who work on making the stimulators safer and more effective
