Newer Medications for Lower Urinary Tract Symptoms Attributed to Benign Prostatic Hyperplasia Michelle Brasure, 2016
OBJECTIVE To assess the efficacy comparative effectiveness and adverse effects of newer drugs to treat lower urinary tract symptoms LUTS attributed to benign prostatic hyperplasia BPH
DATA SOURCES Ovid MEDLINE r the Cochrane Central Register of Controlled Trials and Ovid Embase r bibliographic databases hand searches of references of relevant studies
REVIEW METHODS We searched bibliographic databases through July 2015 Two investigators screened titles and abstracts of search results and full text of relevant references for eligibility Eligible studies evaluated efficacy and or harms of one alpha blocker AB silodosin several antimuscarinics tolterodine solifenacin fesoterodine one beta 3 adrenoceptor agonist mirabegron and several phosphodiesterase type 5 PDE 5 inhibitors tadalafil sildenafil or combination therapy with one of these medications They included randomized controlled trials RCTs with duration of at least 1 month and observational studies for long term e1 year adverse events We assessed risk of bias for RCTs extracted data pooled data for analysis when appropriate and feasible and evaluated strength of evidence for comparisons on an outcome specific basis
RESULTS We synthesized evidence from 57 unique RCTs and 5 observational studies Trials were generally short term e g 12 weeks Silodosin was more effective than placebo in improving LUTS but was similar to tamsulosin and had more adverse effects including abnormal ejaculation Solifenacin AB combination therapy was better than placebo but tolterodine AB solifenacin AB and fesoterodine AB combination therapy were similar to AB monotherapy and combination therapy often had more adverse effects Tadalafil improved LUTS more than placebo but had more adverse effects Tadalafil and tamsulosin were similar in improving LUTS We identified trials testing other drugs mirabegron oxybutynin darifenacin sildenafil and vardenafil but found the evidence insufficient to draw conclusions about efficacy comparative effectiveness or adverse effects Evidence was insufficient to assess long term efficacy prevention of symptom progression e g acute urinary retention or need for surgical intervention or adverse effects
CONCLUSIONS Several drugs newly used for LUTS attributed to BPH alone or in combination with older AB showed evidence of efficacy in short term studies however comparative effectiveness for silodosin fesoterodine AB combination and tadalafil showed that outcomes were similar to older AB monotherapy and adverse effects were often higher with the newly used drugs or combination therapies Evidence on long term efficacy and adverse effects was insufficient
